HyperNym Solution

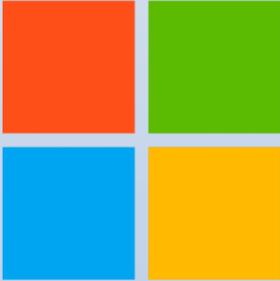

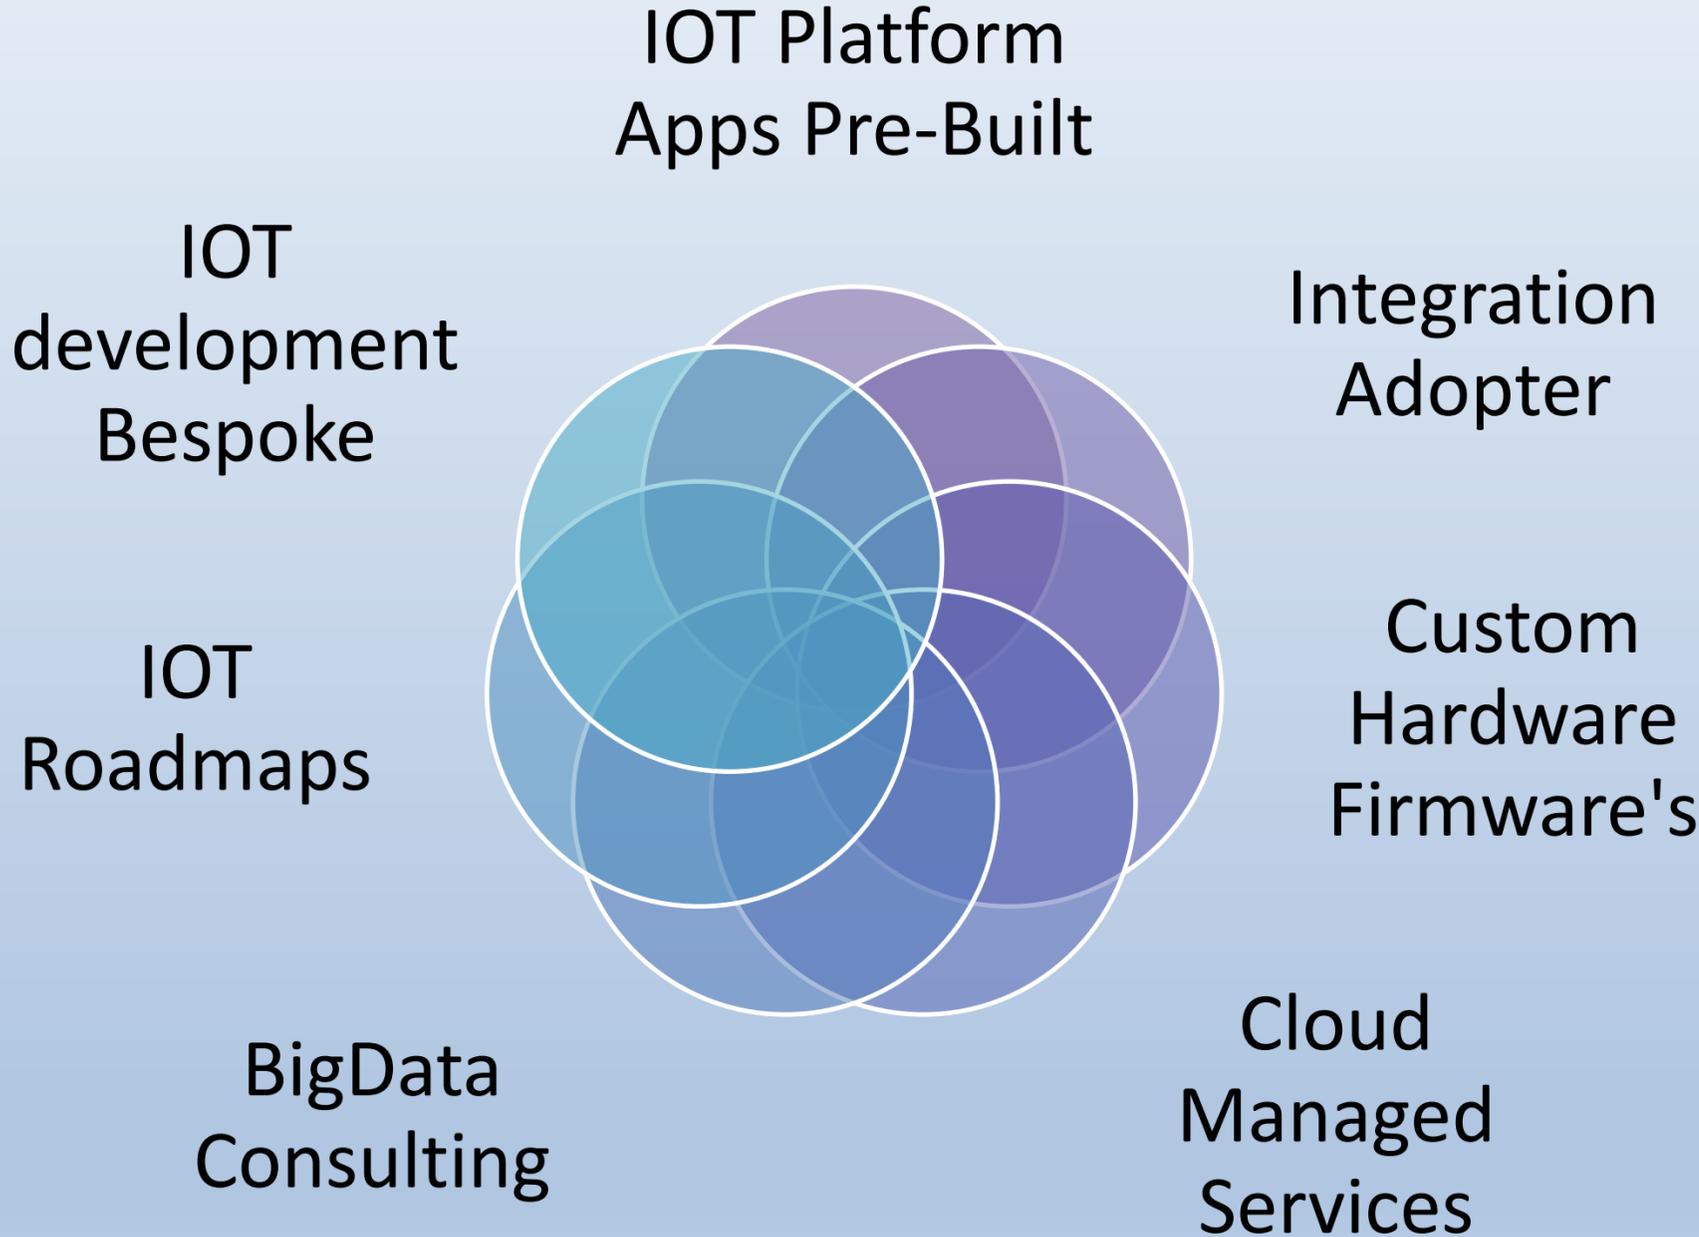

An IoT Solution Provider Company

Who we are?

Who we are?

Microsoft

SaaS Platform For Your IoT Use Cases

14 Pre-Build Use cases across 4 industry pillars

Strong Device Management & Device Provisioning Mechanism

Unique Data Lake based Architecture to maximize the utility of Data across all uses

We design and develop our own industry plugins.

We build great sensors with our hardware partners. In-house experts of Firmware

Build new use cases using existing API libraries

Pre-Built Applications across following verticals on HyperNet

Internet of Logistics
POWERED BY HYPERNET

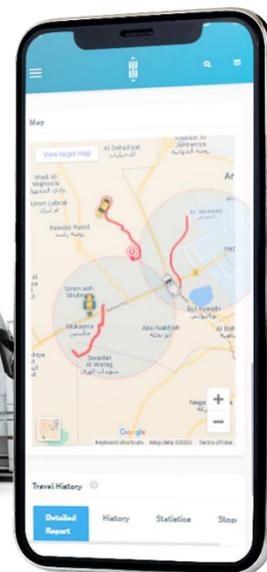

Fleet Management

Waste Management

B2B Delivery

B2C Delivery

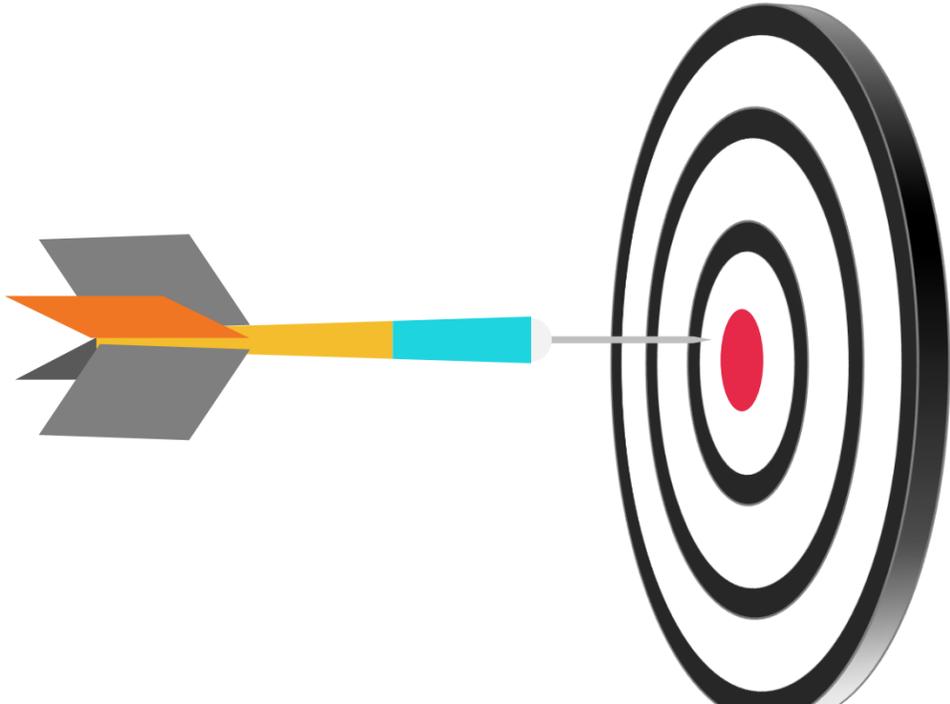

Frozen Food Delivery (FMCG)

Courier Service

Target Market

Fleet Owned Companies

Government and private companies

Distribution Companies

Business Owner

Cold Carrier/Blood Banks/Frozen Food Companies

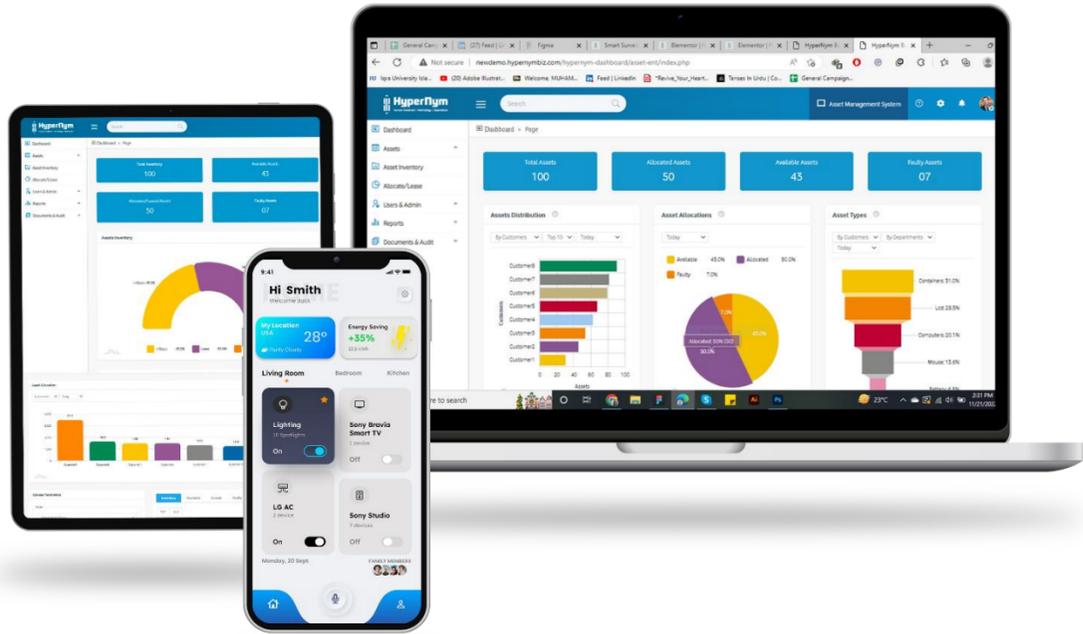

Courier Companies

Pre-Built Applications across following verticals on HyperNet

Internet of Asset Management
POWERED BY HYPERNET

Asset Management

Field Force Performance

Generator Management

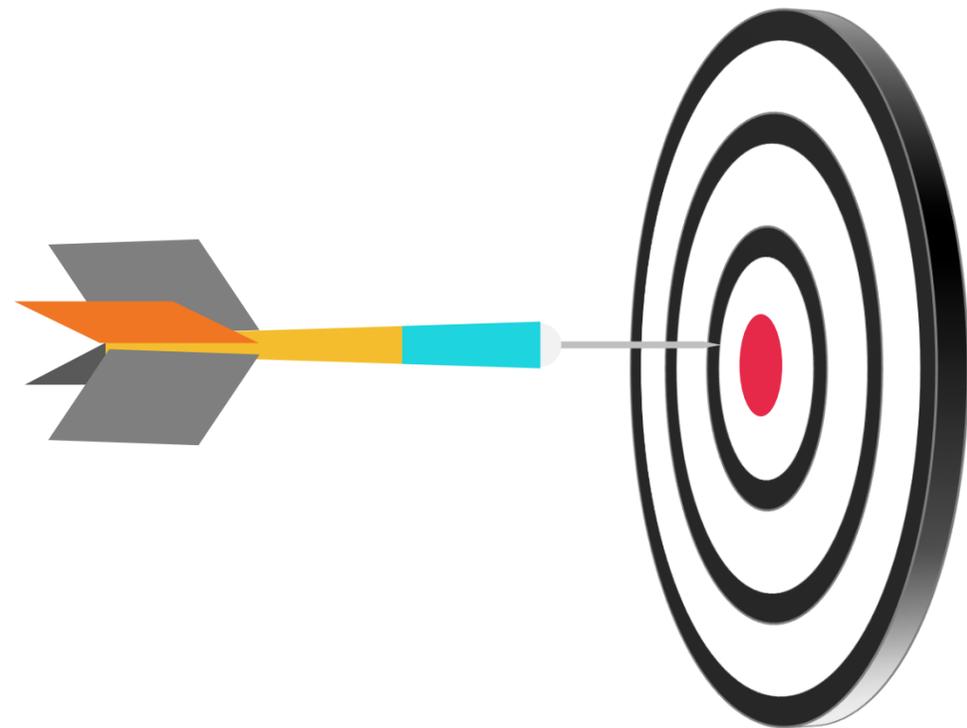

Warehouse Management

Target Market

Internet of Asset Management
POWERED BY HYPERNET

Enterprise Business Industry,

End-Consumer to track the animal, luggage

Cold Chain includes Frozen Food, Blood Bank, Medicine storage

Security Agencies, Sales represented companies

Construction Companies ,OEM/Retails Business Owner

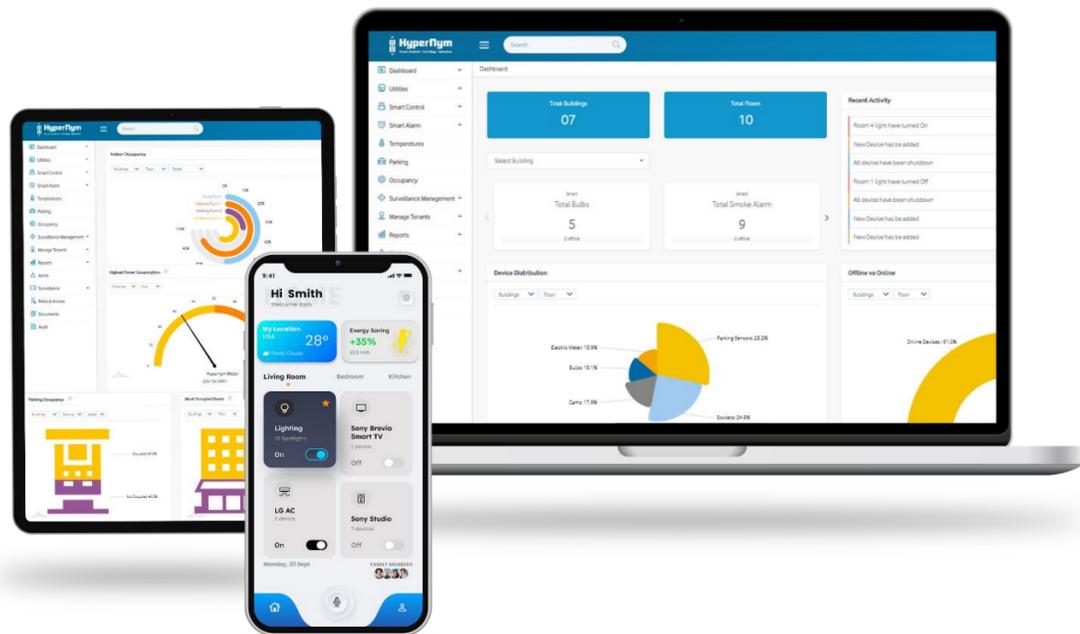

Rental, Leasing warehouse companies

Pre-Built Applications across following verticals on HyperNet

Internet of Smart Building
POWERED BY HYPERNET

HyperNet IoT Platform [Save to my list](#)

HyperNym FZ LLC

[Overview](#) [Plans](#) [Ratings + reviews](#)

Smart SaaS based Platform using IoT Technologies with Artificial Intelligence & Machine Learning

HyperNet Platform is a cloud-based IoT secure and scalable solution that connects with millions of IoT devices, which becomes the eyes, ears, brain of organizations and bring the results for multiple types of organizations, small or large that help in achieving operational efficiency by optimizing operations and decision making.

HyperNet uses different sensors depending on availability to gather information on the road and mobile units. HyperNet Gateway is the motherboard to which all the sensors are connected. The HyperNet Gateway is responsible for collecting the sensor data and transmitting it over the cloud.

HyperNet Platform is designed in terms of scalability factor. The HyperNet platform is fully scalable in a multidimensional manner. Adding onto this extensive feature list, HyperNet Platform integrates with any existing system. on top is the Artificial Intelligence engines to take the digitization to next level by taking significant responsibility of humans.

HyperNet comes on use cases based or as a complete platform to increase the offerings of services providers like internet service providers companies , telecoms or other cloud service providers .HyperNet unlike IoT platforms provides Ready to Launch applications for various uses cases and in the roadmap launching API subscriptions only as well .
